ABOUT WOOD POLES

1882 Lighting Wood Poles are made from strong, reliable Southern Yellow Pine wood and come in sizes ranging from 8' to 16'.

These poles are engineered to enhance the reliable strength of Southern Yellow Pine. Through our kiln-dried after treatment process, we further increase the stability of these pressure-treated Wood Poles. The hollow design of our laminated pole shafts allows for a higher load capacity compared to competing wooden poles, making for a product that will last you longer and be more successful in the long run.
